◆ MICHELL'S ◆◆◆ *Superb Varieties of Narcissus or Daffodils*

TRESSERVE
 Doz. \$2.00; 100, \$14.00

The cheery Narcissus, one of the loveliest of all spring flowers, is a truly worth-while investment. The bulbs increase readily and can be expected to bloom abundantly for many years. When the bulbs become crowded, dig them up and reset them. Michell's offer a wide variety of worth-while kinds. By selecting the various types you can enjoy several weeks of bloom.

For colorful effects in your spring garden, plant Narcissi in groups of six or more. When planted in combination with Grape Hyacinths, Pansies, Violas or English Daisies, they are particularly attractive. Few bulbous plants are better suited to the foreground of the shrub border. Where space permits, Narcissi can be naturalized in sod, provided, of course, that the grass will not be cut until the Narcissi foliage has turned yellow.

Autumn Is Ideal for Rebuilding the Lawn

The cool, moist weather of late summer and early fall affords an ideal condition for rebuilding a lawn that has suffered from drought, neglect, or the ravages of weeds. Seed sown at this time will show quicker growth and has a tendency to stool or spread out, a condition not present during the warmer months. Competition with weeds is practically eliminated at this season, since the latter are incapable of germination until spring, by which time fall-

sown grass is thoroughly established and the weeds have little chance to thrive. Seed may be sown successfully as late as October 15 in the latitude of Philadelphia, but we would recommend the month of September for best results.

Quantity to Sow for Lawns: We recommend sowing 5 pounds per 1000 square feet; 150 pounds per acre on new ground without grass. In renovating established lawns, use half the above quantities.

Send for our **FREE** booklet, "Lawn Pointers," for suggestions on the care of your lawn.
